

Sprint Retrospective 11: 3/08 - 3/17

Scrum Master: Sarah S.

What went well this sprint?

- Communicated with client about terminating DAR report
- All app specific features LLDs (first drafts) completed
- More detailed stand-ups based on sprint planning: task breakdown

What went wrong or lacked this sprint?

- Lack of in person team meetings due to external work (midterms/exams, interviews, etc.)
- Time used on DAR report could have been used on other work items now that we won't be implementing the geolocation API

What will we carry over to the next sprint? (Action Plan)

- Finalizing all app-specific feature LLDs by the first half of next sprint in order for all members to start coding on features
- Finish all security (and account center) auto testing by 3/23 of next sprint in order to have them properly functioning for the first code review on 3/25
- Kay and Carine focus only on app-specific feature during all of next sprint in order to finish in time for code reviews on 3/25 and 4/1

What will we do differently next sprint? (Action Plan)

- Schedule an in person team meeting during the next sprint planning in order to ensure we meet in person at least once next sprint
- Communicate work item priorities in person with all team members at least on Mondays and Wednesdays of next sprint to enable efficient collaboration with one another
- Incorporate client feedback regarding backlog - prioritize finalizing and auto testing "Account Management Center" by the end of next sprint
