

Sprint Retrospective 13: 4/09 - 4/18

Scrum Master: Sarah S.

What went well this sprint?

- Error percentages decreased (more accurate estimates)
- Start working on designs for data protection (core component)
- Shift focus toward getting a full application running with features instead of individual features for code reviews

What went wrong or lacked this sprint?

- Faced several errors and warnings in main branch on GitHub
 - Incorrect project references causing errors and warnings
- Lack of team communication resulting in no in-person meeting for this sprint
- Lack of team communication resulting in conflicting priorities and scheduling deadlines

What will we carry over to the next sprint? (Action Plan)

- Continue working on System Observability and aim to finish coding the backend for Usage Analysis and Archiving by the end of next sprint
- Continue working on Data Protection and aim to finish coding the backend by the end of next sprint
- Finish Task Manager Hub implementation by 4/23 in order to be ready for Code Review on 4/24
- Finish Reservation Confirmation implementation by the end of next sprint to be ready for any open Code Review spot in May

What will we do differently next sprint? (Action Plan)

- Each member will communicate at sprint planning what dates they are available for an in-person team meeting during the next sprint
- Before merging anything to main branch on GitHub from here on out, run app first to ensure there are no warnings or errors by at least 2 members

- Prepare for Team Review (4/22) at the start of next sprint
 - main is updated with all SCRUM docs and contains updated Gantt Chart
 - All work items are completed (in GitHub) according to updated Project Plan
