Sprint Retrospective 10: 2/28 - 3/06
Scrum Master: Sarah S.

What went well this sprint?
- Implemented CORS to server/browsers
- Strong teamwork in order for all members to have common understanding of lecture concepts and team review work
- Spent extra hours organizing main GitHub branch in order to have it fully functioning

What went wrong or lacked this sprint?
- Underestimated team hours due to extra time on homework assignment, late config service implementation, and team review prep
  - High percentage errors

What will we carry over to the next sprint? (Action Plan)
- Finish completing all app-specific feature LLDs and peer reviews by the end of next sprint in order to start coding by the following sprint
- Implement uniform databases for all team members within the next sprint in order to avoid data store errors when connecting to the server from the browser
- Finish coding DAR metric tests by the end of next sprint

What will we do differently next sprint? (Action Plan)
- Increase team capacity for next sprint by at least 5% per week in order to decrease percentage error
- Increase in person meetings by 1-2 times a week, before or after class in order to be on the same page with all work items for the sprint
