Sprint Retrospective 07: 1/25 - 1/31

Scrum Master: Sarah S.

What went well this sprint?
- Exposure and practice with HTML and CSS for frontend of application
- Consistent sprint stand-ups every day with Discord reminders at a set time
- Received help during lecture for MVC in .NET
  - Starting point for semester
- Consistent feedback throughout sprint for each work item

What went wrong or lacked this sprint?
- Not enough information on MVC requirements in order to implement UI aspect of LLDs for Account Center and Security
  - Could not finish Designs for Account Center and Security
- Worked fewer hours than expected in sprint planning
  - Mostly used time towards research instead of productive hours
- Not enough features per member and improper distribution of functions for Code Review
- Unable to finish DAR Report due to lack of time and communication with Vong

What will we carry over to the next sprint? (Action Plan)
- Add Phase 2 feature into project plan once Code Review dates are set to have enough individual points for every team member
  - Fit phase 2 feature into project plan by code review dates
- Finish implementing LLDs with UI/frontend for Account Center and Security by the end of next sprint

What will we do differently next sprint? (Action Plan)
- Meet as a team at the start of the next sprint and discuss the frontend and UI aspects of application in order to have a uniform design and concise work flow

- Each member must follow class diagram of web app in order to have a strong understanding of how to build the frontend
    - Build frontend starting small then building/branching out from starting point
- Review project plan at the start of each sprint to pace work items on time (internal deadlines) and according to set plan (including Phase 2 feature)
